The purpose of eye gaze trackers, also called eye trackers, is to determine where an individual is looking. The primary use of the technology is as an input device for human-computer interaction. In such a capacity, eye trackers enable the computer to determine where on the computer screen the individual is looking. The most effective and common eye tracking technology exploits the "bright-eye" effect. The bright eye effect is familiar to most people as the glowing red pupils observed in photographs of people taken with a flash that is mounted near the camera lens. In the case of eye trackers, the eye is illuminated
